CHAPTER 1

Introduction

1.1 Project Overview :

Event management is the application of project management to the Creation and Development of events such as Wedding ceremonies, formal parties. People that are need to find or book online event halls and or willing to see the packages and timing slots online about halls. They will be able to get all this information through this website. To make an event successful event Manager needs different service provider like Sound systems services, Lighting providers, Canteen services, stage construction and so on. Event management system is used to manage all the activity related to event.

1.2 Problem Statement :

Event management system is used to manage all the activity related to event. In any event many service providers work simultaneously and it is very hard to manage these providers. It is also important for event organizer that he has all the contact details of these service providers so that he can contact them any time to plan an event at a given time. To manage all these activities I'll develop this Celebrations Event Management. To make an event successful event manager needs different service provider like Sound systems services, Lighting providers, Canteen services, stage construction and so on. In present system Event Company has to do all management work manually. They keep all payment information on papers. There is no system to check the past expenses on any event. To do this they have to check payment register and this task is very time consuming and tiresome. To overcome this problem celebrations event management will implement.

1.3 Scope:

1. This System will be designed to manage only 3 or 4 events which can be extended to manage more Events.
2. This System will be able to store information on cloud with data security.

1.4 Objective:

1. This system automatically generate certificate and issue it/mail it.
2. System very efficiently store, maintain and retrieve data from its database and can be used for further analysis.
3. This system provides latest notification to its user .

CHAPTER 2

Requirement Analysis

2.1 Functional Requirement

2.1.1. Registration:

To enter into this site user has to register himself first.

2.1.2. User Login:

The System provides facility to login into the system.

2.1.3. Book an Event:

The user can select the event and also select venue for event if venue is available then select a payment method.

2.1.4. Book Venue:

If customer wants to organize their event at home this system will provide decorations packages and it will also provide option to organize events at external venue.

2.1.5. Notification/updates:

User will get to know any notification, recent update or important messages through email.

2.1.6. Cancel event/ venue:

User will able to cancel booked event/venue.

2.1.7. Add decorations:

Admin Will have authority to add all types of decorations items which are needed to decorate the venue.

2.2 Non-Functional Requirement

2.2.1. Performance Requirements:

The system needs to be reliable

Web pages are loaded within few seconds

2.2.2. Safety Requirements:

The details need to be maintained properly.

Users must be authenticated.

The database must be kept backed up

2.3 System Requirements

2.3.1 Software Requirements

Operating system : any 32-bit/64-bit OS
Front end : HTML, CSS, BOOTSTRAP
Back end : PHP
Database Support : MYSQL

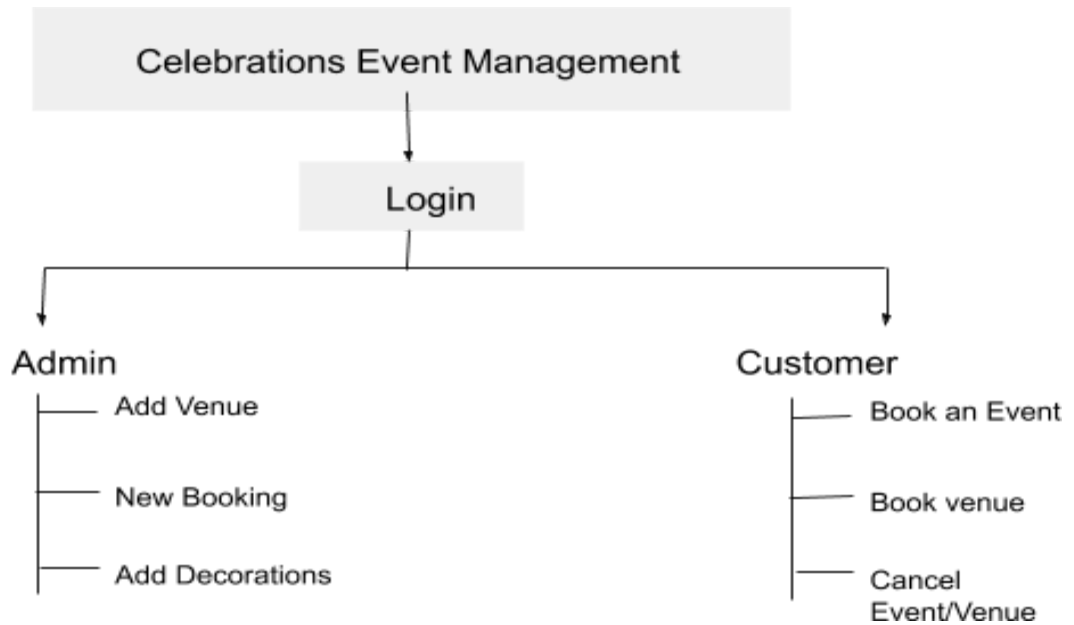

2.3.2 Hardware Requirements

RAM : 8GB
Processor : Intel core i5
Speed : 2.20 GHz.
